

450 Email Error

(Mail Hosting: NTT Communications (Thailand) Co., Ltd.)

A **450 email error** is typically a temporary routing issue on the receiving mail server's end. Sometimes these are also Grey-listing responses from the receiving mail server used to filter incoming mail.

Grey-listing is a method of accepting messages a mail server can use that will block the first attempt to deliver a message, and require a certain number of successful retries from the sending mail server, before allowing the original message to get relayed through the receiving mail server. This tactic is typically used to help cut down on spam from spammers that don't utilize a legitimate mail server that will retry delivery attempts to ensure they go through.

You usually would not receive a bounce-back message for this type of error. If your message is going to be delayed more than 24 hours, then sometimes a "**delivery has been delayed**" soft bounce will be returned to you, to let you know that the delivery has yet to complete successfully.

Common variations of the 450 email error

- **450 4.1.1** <recipient@RemoteDomain.com>: Recipient address rejected: unverified address: Address verification in progress
- **450 4.1.1** <recipient@RemoteDomain.com>: Recipient address rejected: unverified address: unknown user: "recipient@RemoteDomain.com"
