554 Email Error

(Mail Hosting: NTT Communications (Thailand) Co., Ltd.)

A **554 email error** is sometimes thought of as a catch-all of email errors. It is generally used when there is a generic delivery failure that another email error code doesn't directly define a problem for.

Some mail servers also use a 554 error even if there is a specific error code that defines what went wrong all ready.

You should receive a bounce-back message from the server with a variation of email error 554 in the subject, and the body should contain your original message that you attempted to deliver.

Common variations of the 554 email error

- **554 5.7.0** Message Size Violation

- **554 5.7.1** Message blocked due to spam content in the message

- **554 5.7.1 [P4]** Message blocked due to spam content in the message.
