

## 421 Email Error

(Mail Hosting: NTT Communications (Thailand) Co., Ltd.)

A **421 email error** is typically a temporary routing issue on the receiving mail server's end. These should usually be resolved automatically, and you should receive a final bounce-back message if the message completely fails.

You usually would not receive a bounce-back message for this type of error. If your message is going to be delayed more than 24 hours, then sometimes a "**delivery has been delayed**" soft bounce will be returned to you, to let you know that the delivery has yet to complete successfully.

### Common variations of the 421 email error

- **421 4.2.1** : (DYN:T1) <http://postmaster.info.aol.com/errors/421dynt1.html>
